DELUXE PUMPING STATION

A-OK's Deluxe Pumping Station is economical and built to stay that way! Its energy efficient design saves operating dollars. The individual stainless steel, fresh water supply float tanks allow the unit to operate with either instantaneous or storage type water heaters. The unique design of the system has the pump, motor and all electrical controls conveniently located well up off the floor, for ease in maintenance. With just a glance at the pumping station, you or your attendant can monitor the cycle indicator lights, the pump pressure gauge reading, and the detergent and wax flow rate indicators. Pulley belt adjustments are a snap with the front mounted belt tensioning device. Changing oil in your pump's crankcase is as easy as opening a valve, no fuss, no mess. The heavy duty adjustable overload motor starter protects against motor burn out. The frame is constructed of heavy gauge tubular steel with adjusting levelers on each leg, and is painted with oven-baked enamel paint, the frame is also available in stainless steel. The Deluxe Pumping Station comes completely pre-plumbed and prewired. Each and every pumping station must pass a thorough in-plant testing procedure before shipment. The system is available with 3-phase or 1-phase motor, manual or automatic weep system. Hot or cold water rinse is another option available to

accommodate your needs. Why not have the best of both worlds—Quality equipment with an economical price tag!

DELUXE PUMPING STATION FEATURES:

- Water tight enclosure protects all electrical components.
- All components are UL approved.
- Detergent and wax flow indicators.
- Cycle indicator lights.
- Heavy duty motor starters, with built in adjustable thermal over-load protection.
